

Flexvent

automatic float vents

Systems in which the water is properly deaerated and are free of contamination are more efficient, produce less noise and have a longer service life. The Flexvent floatvents are essential in closed hot and cold water installations and absolutely the best choice. Air is automatically bled by placing a Flexvent floatvent.

SOTEX supplies the Flexvent Top, Flexvent Super and the Flexvent Max. All three are highly effective and totally reliable. The Flexvent Super and Max are identified by a conical cap. The advantage of this design is that it maximises the clearance between the water level and venting valve. The Flexvent Super is the best value for money and by far the most popular of the vents we supply.

	syst. conn.	diameter	height
Top	1/2" in	54 mm	86 mm
Super	1/2" in	73 mm	119 mm
Max	3/4" in	77 mm	120 mm

- Maximum water temperature of 120 °Celsius.
- Suitable for glycol solutions of up to 50%.
- Maximum pressure of 10 bar.
- All Flexvents are tested before delivery.
- Reliable and easy to install.
- If underpressure is registered in the installation, e.g. when draining the installation, the Flexvent floatvent also works to admit air.
- Comes with an anti-leak mechanism to prevent leaks.
