

NFE

water suppletion units

The ENA and Vacumat Eco degassers can also be used as a refill machine as an option. If necessary, water will be added to the system via the degassing installation. The water will first be degassed by the ENA / Vacumat Eco before it enters the system. In addition to switching on the software, an NFE water replenishment unit must be connected.

- The NFE 1 is a connection group for direct supplementation from the drinking water network according to DIN 1988 and DIN EN 1717. The NFE1.1 consists of BA backflow protection, water meter, dirt separator, ball valve and non-return valve. The NFE 1.2 is equally equipped, however, with a pulse water meter.
- The NFE 2 is a complementary extension group from a network that has already been included. The NFE 2.1 consists of water meter, dirt separator, ball valve and non-return valve and the NFE 2.2 is equally equipped with a pulse water meter.
