

SAC Air Cleaner

compressed air treatment unit

SOTEX supplies compressed air vessels and compressors. The correct treatment of the compressed air really is an absolute necessity. Needless to say, compressed air systems have separately supplied refrigeration or membrane dryers, compressed air filters and oil/water separators, but SOTEX also supplies complete SAC compressed air treatment units.

The main advantage is that the complete compressed air treatment system is housed in a stainless steel tubular frame, which makes it easy to place and connect. Plug&Play.

The SAC series units come with a standard configuration:

- prefilter 1 µm
- refrigeration dryer 1x 230 VAC
- humidity filter 0.01 µm
- active carbon adsorber
- fabric filter 1 µm
- oil/water separator

This standard configuration removes condensation, dust and oil vapour from the compressed air to leave it absolutely clean for by far the most applications.

Naturally, specific configurations are always possible. For comprehensive advice, please contact our sales department.
