

Compressors

screw- and piston compressors

Compressed air advice and supply? SOTEX can also assist you with this. The right compressor for the right application as well as the related compressed air treatment. Thanks to our many years of experience with a wide range of compressors and air treatment options for our nitrogen generators, we can rightly call ourselves a specialist in this field. SOTEX advises on and supplies all brands of compressor. It should be noted that our specialism is primarily within the field of professional applications and that we are a dealer of Atlas Copco screw compressors and Gentilin piston compressors.

Atlas Copco screw compressors are extremely reliable, quiet and energy-efficient. A very well known global brand. The Gentilin piston compressors are possibly the quietest piston compressors on the market. For more specific information, visit our website or the manufacturer's website.

Each application has its own specific characteristics. Which is why sophisticated compressed air treatment is so important. Factors include the correct filters (dust, moisture, oil vapour), the correct cooling or adsorption dryers (moisture separation) as well as active carbon adsorbers (saturated oil vapour capture). All rounded off with an oil/water separator, of course.

In addition, SOTEX can provide piping and ducting if required, supplemented by a wide range of compressed air instrumentation, compressed air storage vessels and fittings.

For sound advice, please contact our sales department.
